

How to see the playback of your NVR on MontavueGo Desktop

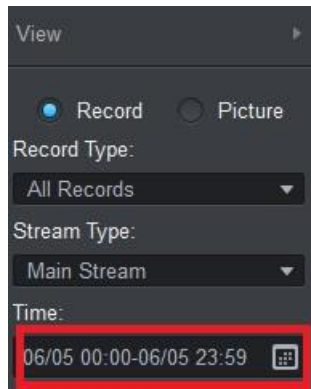

1. Open the MontavueGo app. Navigate to a New Tab > Under Search Click on Playback

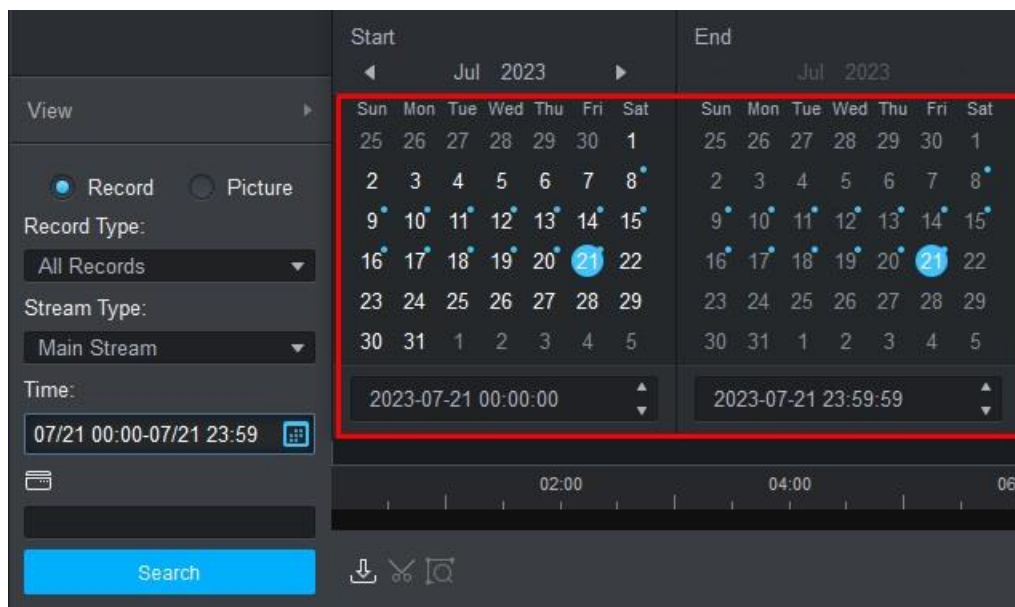

2. Under Default Group > Next to your NVRs name click the arrow to show the cameras > Select a camera to view

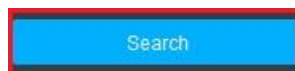

3. Select the Calendar under Time

4. Select a Date with a blue indicator, which means the day has a recording, and select the time you would like to review

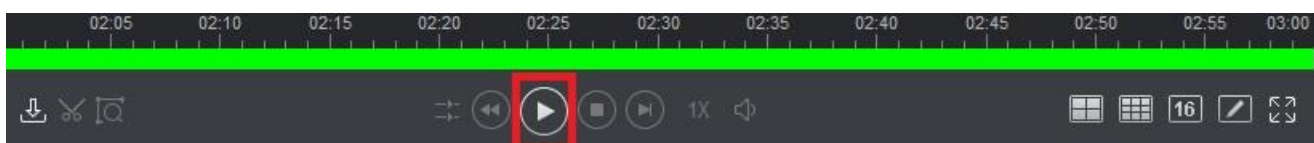

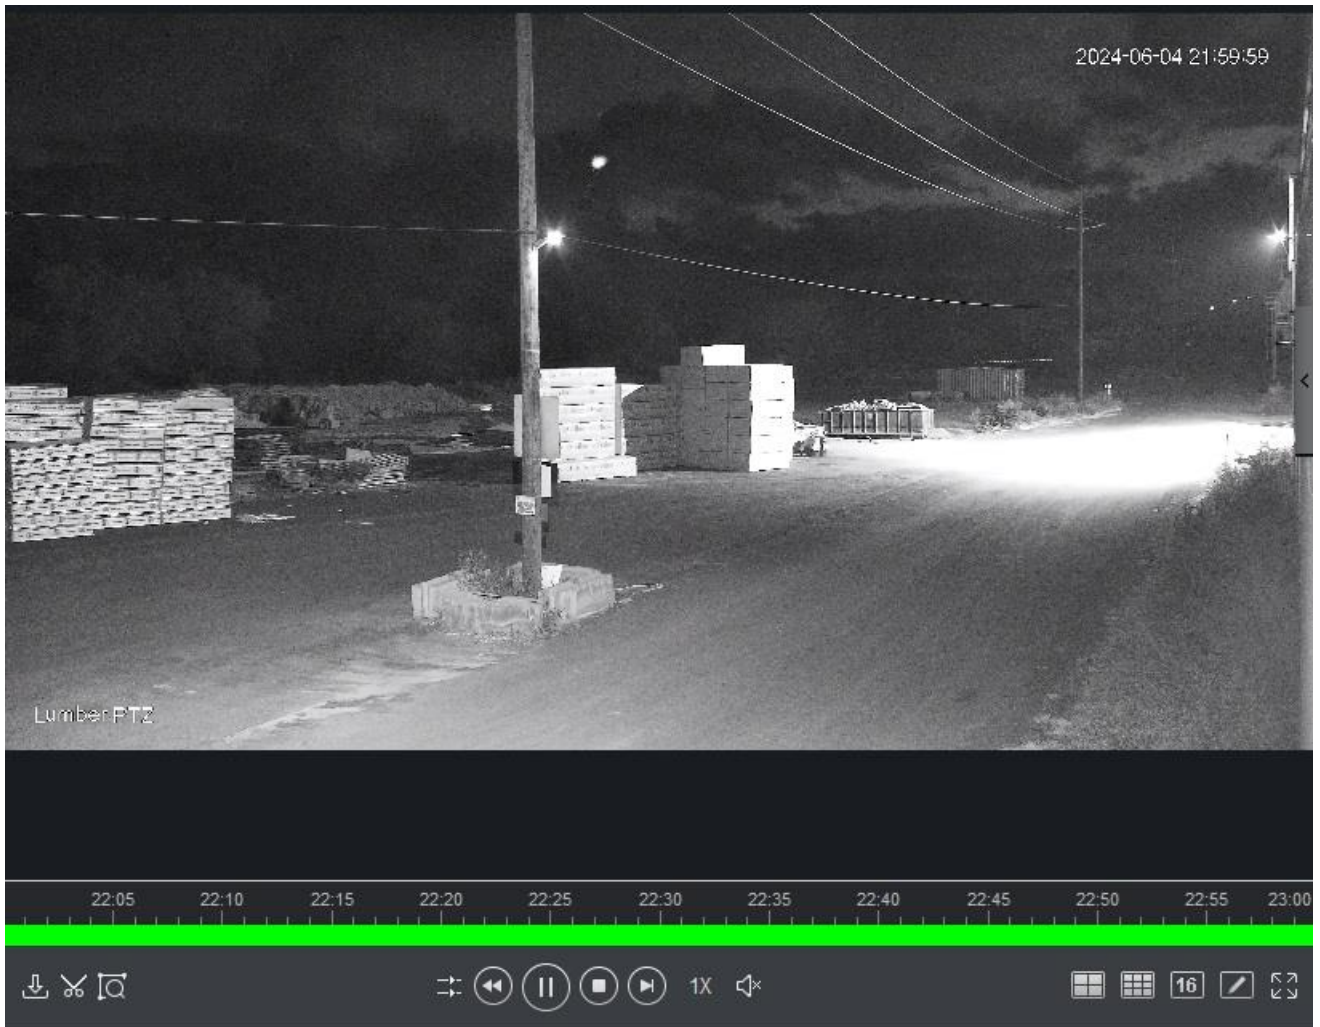

Be sure to click on search to load the video

Note: If you are trimming video you need to make sure that you are giving more than an hour worth of time, since the clipping tool will do hour clips initially.

5. When you hit the Play button you will see the camera from the start of the day's playback

6. You are able to click on the timeline to scrub through any time throughout the day
